

KEY FEATURES

FLEXIBILITY

- Integrated with Oracle Identity Management and SSO
- Support for Radius, LDAP, OID, OVD, or virtually any data store
- WS API and Rules Engine

SECURITY

- Firewall Support
- Advanced Trust and Federation
- Strong Authority via PKI

PERFORMANCE

- SSL Offload
- Acceleration and Compression
- Protocol Optimizations

AVAILABILITY

- High Availability Architectures
- Advanced Health Monitors
- Proven L4-7 Leadership

F5 BIG-IP LTM SOLUTIONS FOR ORACLE IDENTITY MANAGEMENT

F5's BIG-IP® Local Traffic Manager (LTM) for Oracle Identity Management is a world class Application Delivery Networking solution. F5's BIG-IP ensures Oracle Infrastructure and Applications are always secure, fast and available. Integrated with Oracle Identity Manager's Single Sign-On, F5's BIG-IP solution provides market leading availability, strong security postures, enhanced authentication, increased flexibility and optimized performance for all of today's heterogeneous application and network access environments.

Availability and Security Challenges

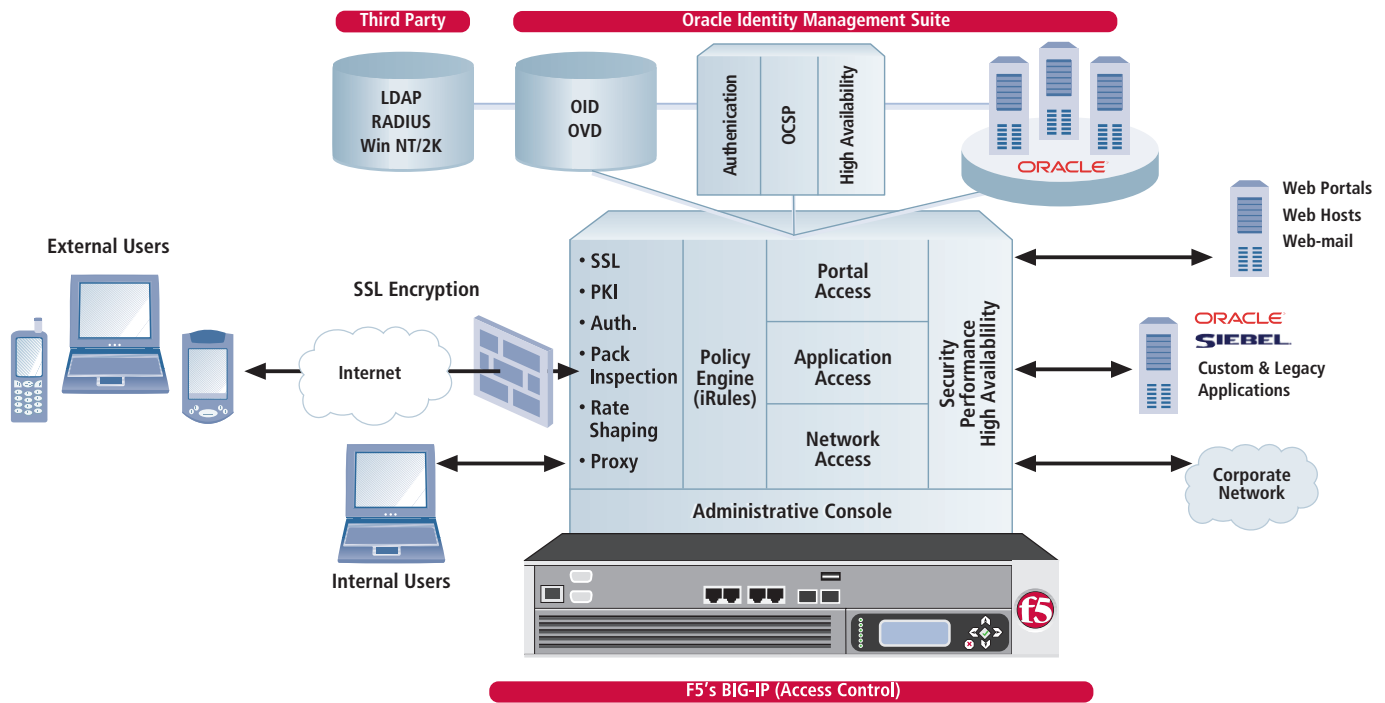

Enterprises today are under siege not only from security threats, but also from users wanting consistent system availability. They require performance all the time from network resources, file servers and mission critical applications to be productive. Demands from all ranks continue as users want unified access, not just at work, but on the road, from home and via every Internet connection on every device type imaginable. When adding these complexities to the growing requirements, along with compliance and regulation issues, it is easy to see why CIOs and IT professionals charged with matching technologies to these challenges have a rough ride ahead.

Secure Provisioning Problem

It is fairly easy to provide secure provisioning and access to systems, especially when applications or provisioning does not need to be integrated, fast and always available. Once you try to satisfy all these variables, the costs and complexity to develop and manage a system grows exponentially. Today, however, there is a simple and elegant way to resolve all of these business problems by utilizing F5's efficient and effective BIG-IP Application Delivery Networking Solution for Oracle Identity Management.

F5 BIG-IP Solution for Oracle Identity Management

By deploying the BIG-IP solution and Oracle Identity Management, enterprises gain system availability, deeper provisioning integration, and new performance capabilities. Now SSL, Load Balancing, Acceleration, Authorization and other capabilities can be offloaded to F5's unique TMOS platform. This revolutionary architecture offers enterprise systems both application and network services in a common platform, all tightly integrated with Oracle for hardening the end-to-end system. Together, F5 and Oracle's BIG-IP Identity Management Solution allow enterprises to manage broad user identities, across all resources, with more granular inspection and in a stronger security posture.

PRODUCT FAMILY

ORACLE

Oracle Identity Management allows enterprises to manage end-to-end lifecycles of user identities across all enterprise resources, both within and beyond the firewall. You can now deploy applications faster, apply the most granular protection to enterprise resources, and automatically eliminate latent access privileges. Leverage the Oracle Identity and Access Management Suite in its entirety or deploy individual components of the suite to meet your unique needs.

F5 Networks

F5 is the leader in Application Delivery Networking. F5's BIG-IP combines high-performance hardware platforms with powerful software that incorporates advanced application traffic management and security features in a modular, full-proxy architecture.

Key Features

- **Flexibility** – F5 provides integrated support for Oracle's Single Sign-On where either F5's BIG-IP, Oracle's SSO or a Third Party login can drive SSO and Access and credential each other.
- **Security** – Enhance compliance with Secure end-points, and PKI.
- **Performance** – Offload SSL and provide "SSL everywhere" without sacrificing performance.
- **High Availability and Scale** – Make many resources appear as one and scale your systems in a single datacenter or across multiple datacenters, all with market-leading high availability traffic management solutions.

F5 BIG-IP Local Traffic Manager and Oracle Security

Ask yourself and your team: Can any other High Availability Identity Management Solution offer you the following?

- Out-of-box platform integration with Oracle SSO, OID, OVD, OIM, COREid, OWSM, LDAP and others third parties, all with XML and WS flexibility.
- 99.999% uptime for your Access, Provisioning, Identity Management and ERP and CRM Applications.
- Performance enhancements with SSL Offload, Acceleration, Compression, Rate Shaping and Protocol Optimizations.
- Market Leadership in Gartner Magic Quadrant Q1 2006 for F5.
